Studiocracy Profiles Requirements Specification June 7, 2015

Project Overview

Studiocracy is Reddit meets Etsy for local art. We address the difficulty emerging artists have with getting their work noticed by letting them bypass the gallery system and interact directly with their community. Unlike other art retailers, we're a social network first and a marketplace second. We track user engagement through a community voting system and use that data to help artists develop their careers and complete more sales without the pressure of having to treat their studio like a business.

The profiles team is in charge of creating an intuitive process for new users to register with Studiocracy. The team will design the process from the point where the user clicks "Sign Up" to the point where the user has completed their account registration with an active profile. The most important aspect of this process will be the portfolio generator for artists. One of Studiocracy's key goals is be a professional network for artists similar to LinkedIn. To achieve this goal, all artists registered with Studiocracy must have an updated portfolio with relevant information by the time they complete their registration. The registrations team will design the onboarding process, as well as implement and modify designs for the final portfolio editor and view. Eventually, the portfolio generator will be able to dynamically generate portfolios based on available information.

Product/Service Description

1.1 Product Context

The registrations and profile generator is the starting point for the user's identity on the site. The portfolio generator will eventually integrate available data visualizations provided by the analytics team. Additionally, the goal of the registrations process is to generate user objects based on an existing database schema.

1.2 User Characteristics

Our users fall into two categories: artists who are looking to build a portfolio to share and sell their work, and non-artists who are interested in viewing and possibly purchasing works. Artists will likely be younger, with little to no professional experience in the art community. Non-artists will be of any age range, and will be looking to view artists' works.

1.3 Assumptions

You may assume that the user is using a modern web browser equipped with modern web technologies such as Javascript. You may not make assumptions about whether the user is viewing the site on mobile, tablet, or desktop. Therefore, the project must be fully responsive in its implementation across devices.

1.4 Dependencies

See onboarding documents for instructions on setting up your development environment.

2. Requirements

Functional Requirements

Req#	Requirement	Comments
STDO_PG_01	AS A user	Options should be sign in with
	WHEN I click sign-up	email and sign-in with
	THEN I am taken to a page when I can choose my method of	Facebook using OAuth. OAuth
	signing in	integration already completed.
STDO_PG_02	AS A user	The user will then be notified
	WHEN I click sign-up with email	that they need to confirm their
	THEN I am prompted for my email and password	account via email to receive
		posting/voting privileges.
STDO_PG_03	AS A user	Facebook will prompt users for
	WHEN I click sign-up with Facebook	access to their personal
	THEN I am prompted for my Facebook log in information	information. *This is already
		implemented *
STDO_PG_04	AS A user	Should prompt: "Do you have
	WHEN I have registered my account	any work you'd like to share?"
0700 00 05	THEN I should be identified as an artist or non-artist	YES NO
STDO_PG_05	AS A non-artist	Personal information should
	WHEN I identify as a non-artist	include full name, location
	THEN I am presented with a form to provide required	(city), title tag (optional).
CTDO DC 06	personal information to complete my profile AS A non-artist	Clicking it will take the uper to
STDO_PG_06		Clicking it will take the user to the edit profile page
	WHEN I provide required info THEN I am returned to the previous page I was viewing with	the edit profile page
	an notification that my profile was created and the option to	
	add more info if I click it	
STDO PG 07	AS AN artist	Form should be the same as
0.00_1 0_0/	WHEN I have registered my account	non-artists
	THEN I am presented with a form to provide required	
	personal information to complete my profile	
STDO PG 08	AS AN artist	Additional portfolio
	WHEN I have provided required personal information	specifications will be provided.
	THEN I am provided with forms to create a portfolio of my	Full-team meetings will be held
	works and provide additional professional information	to design the portfolio creator.

Data

Some USERS will register through Facebook. Users accounts created with email require an EMAIL ADDRESS and PASSWORD. PASSWORDS must be at least 6 characters in length and include at least 1 number OR symbol. USERS will be ARTISTS or NONARTISTS. All USERS will require a FIRSTNAME, LASTNAME, and LOCATION. [See table on next page for more details]

Manageability/Maintainability

Documentation

Code will be adequately documented to allow for ease of understanding, either with comments in the supplied code or separate documents..

* = required Table: User

Table: User		
Column	Data type	Comments
fname*	String	auto-filled if signed-up via Facebook
Iname*	String	auto-filled if signed-up via Facebook
artist*	boolean	1 = artist, 0 = non-artist
email*	String	auto-filled if signed-up via Facebook
password*	String	encrypted w/ Devise. auto-filled if signed-up via facebook.
city	String	
state	String	
bio	String	
stripeid/access_code/publishable_k ey	String	ONLY artists may connect their account to Stripe to link their bank account and sell art
zip_code	String	
provider	String	Will automatically be "Facebook" if user signed up via Facebook; otherwise set to null
Table: Post		
Column	Data type	Comments
title*	String	
content_md	String	Description of the work
user_id*	integer	Links post to user
year_created	integer	
medium	String	
dimension_height	double	
dimension_width	double	
measurement	String	(unit of measurement for dimensions)
weight_in_pounds	double	
	•	

price*	double	Already corrected for precision errors, but be careful about this.
quantity	integer
